

Guam Navy Regional Environmental Management Policy

The Navy Team Guam, including Commander U.S. Naval Forces Marianas, U.S. Navy Public Works Center, Guam, Officer in Charge of Construction Marianas, and Raytheon Technical Services Guam, is committed to being an environmental steward and leader in protecting and preserving our Natural and Cultural Resources while fulfilling our mission to support the fleet. Our proactive environmental, health and safety initiatives contribute to sustainable development by preventing workplace injuries, reducing waste, preventing pollution and properly managing risks. Through our Environmental Management System (EMS), the Navy Team Guam will:

- Provide a safe and healthful workplace, ensure that personnel are properly trained and have appropriate safety and emergency equipment.
- Be an environmentally responsible neighbor and partner in the communities where we operate, and act promptly and responsibly to correct incidents or conditions that could endanger health, safety, or the environment.
- Conserve natural resources by reusing and recycling materials, and purchasing recycled materials
- Work cooperatively with the academic and professional community to support environmental research and promote a better understanding and appreciation of our environment through educational outreach initiatives.
- Develop and implement continual process improvements and innovation to minimize waste; prevent air, water, and other pollution; and dispose of waste safely and responsibly.
- Ensure the responsible use of energy throughout our mission and activities by conserving energy, improving energy efficiency, and giving preference to renewable over non-renewable energy sources when feasible.
- Meet all applicable federal and local environmental health and safety regulatory requirements, as well as other voluntary requirements to which the Navy subscribes. Where practicable, our goal is to surpass the minimum standards of performance.
- Establish and review Environmental Objectives and Targets annually.
- Strive continually to improve our EMS and performance.
- Conduct audits and self-assessments of the Navy Team Guam's compliance with this policy to measure progress of environmental performance.

The Navy Team Guam management will review the performance and adequacy of the EMS and address the necessary changes to the policy, objectives and targets on an annual basis.

Every employee and every contractor working for the Navy Team Guam is expected to follow this policy and to report any environmental, health, or safety concerns to management. Management will take quick and appropriate actions to address concerns and reduce environmental risks.

RADM Tom S. Fellin
Commander, U.S. Naval Forces Marianas

Mr. Danny S. Long
RTSG Program Director
